SUBMISSION HIGHLIGHTS: PAPER I (v2.1 - FED)

Target Journal: Fusion Engineering and Design (Elsevier)

Author: Jacob James Rasmussen

- Fast-neutron cascades contract tungsten CPS pore radius from 25.0 to 15.2 um.
- Carman-Kozeny permeability exhibits a 70% non-linear decay under 20 dpa flux.
- Critical dryout heat flux drops to 22.5 MW/m^2 at 9.8 dpa (SF = 1.50 limit).
- Complete thermal dryout parity with baseline heat flux occurs at 13.0 dpa.
